HOW ARE WE DIFFERENT ?

The difference lies in the service delivery. In any Organization Cost, Quality & Service place a very pivotal role in determining the vendor selection.

It is very important for a customer to look for a right vendor to out source its documentation services at a right price.

We are different because we always believes in customer satisfactory services this is why we have placed our Engineer's locationally.

If customer faces any problem with the existing printer we have the ability to replace the printer immediate with a new one.

Many a times customers ask us, how are we different with all vendors supplying if not same but similar kind or use Equipments/Technologies.

It can be answered in 3 simple points :

- 1 Understand the truth behind the solutions docs service deliver - Our back office operations, where we have strong networks with direct communications and information exchange, we ask our vendors to supply us with our proven and tested cutting edge technology to provide unmatched value to the customer.
- 2 Genuine parts and consumables support in an integral part of our service delivery and since we assure our customers with high efficiency standards, this is one such requirement which is an integral part of our standardized quality process and efficient service delivery.
- 3 Time period of the consistent services rendered is important part of all said and done. In case the customer gets the value of what we offer we stay there long enough. Our average customer retention period has been staggering 10 years on an average and increasing. Moreover, if service has been an issue for any discord, we can assure you, it is the last on our client's list.

DISPATCHER PARAGON PRINT MANAGEMENT

✓ Category

User & Cost Management

✓ Characteristics

- Detailed output and cost reporting
- Cost assignment and chargeback
- Central user and role management
- Budget and quota management

KEY FEATURES

✓ Detailed output and cost reporting

- **Web reports:** Easy creation of detailed overviews and flexible reports that can cover all activities of single users or user groups, this facilitates the monitoring of costs on a daily, weekly and monthly basis or over longer periods.
- **Management reports:** Automatic as well as on-demand compilation of such reports to provide the company's management with comprehensive overviews detailing the entire print environment in a clearly structured and easy-to-grasp layout
- **Export of report results:** Export of reports into various formats to facilitate and speed up the sharing of results.
- **Automated reporting:** Scheduling function that generates reports automatically at regular intervals (monthly, quarterly or annually) for an even more comprehensive overview.

✓ Cost assignment and chargeback

- **Print accounting and monitoring:** For the easy compilation of comprehensive print histories, all print activities in the network can be tracked in real time. The Dispatcher Paragon embedded terminal provides detailed copy, scan and fax accounting (also possible via external terminals).
- **Flexible cost allocation:** The administrator can assign users to specific cost centres; alternatively, each user can individually select the appropriate cost centre or project before printing.
- **Individual price calculation:** Different devices, cost centres and users can be assigned individual price lists. Thus, even in a heterogeneous print infrastructure an accurate calculation of print costs is possible.
- **Tracking of third-party devices:** Print job tracking can cover the entire corporate printing infrastructure; i.e. it is also possible for non-Konica Minolta devices.

✓ Central user and role management

- **Centralised user management:** Individual user access rights to MFPs for copy, print, scan and fax functionalities can be easily and conveniently managed centrally.
- **User access roles:** The administrator can grant users different levels of device access and device functionalities, the levels are easily managed by creating corresponding user roles.
- **Centralised authentication management:** User log-in Types to the device include card authentication, user credentials and PIN authentication, with the administrator determining which type of user authentication should be active

Budget and quota management

- **Easy budget assignment:** The administrator can assign individual budgets to different users – which facilitates limiting the printing activities of specific users in order to keep print, copy, scan and fax costs under control.
- **Periodic budget reset:** The budgets assigned to individual users and user groups are best managed via automatic reset or top-up at specified intervals; this relieves the administrator of such a mundane task. It is still possible to resetting and change budgets or quotas manually, which allows for exceptional print jobs in-between.
- **Payment system:** Dispatcher Paragon offers various convenient options to reload their user accounts:
- **Cash desk reload:** A cash desk operator collects money from the user, which he then credits to the user account via the Dispatcher Paragon Cash Desk Management application.
- **Self-service reload:** Via a payment machine users are able to pay money (coins and bills) into their account directly.
